

What is claimed is

1. A liquid crystal display device comprising:  
a liquid crystal panel including a display area;  
a light source joined with the liquid crystal panel;  
a first frame coupled to a surface of the light unit and  
sides of the liquid crystal panel;  
a second frame coupled to edges of the liquid crystal  
panel and sides of the first support frame;  
an outer casing; and  
10 a fastening part joining together the first support  
frame, the second support frame, and the outer casing through the  
sides of the first support frame, the second support frame, and the  
outer casing.

15 2. The liquid crystal device according to claim 1, wherein  
the fastening part includes a screw hole.

3. The liquid crystal device according to claim 1, wherein  
the sides of the first support frame, the second support frame, and  
20 the outer casing are substantially perpendicular to the viewing  
direction of the display device.

4. The liquid crystal device according to claim 1, wherein  
the first frame supports the light source.

5. The liquid crystal device according to claim 1, wherein  
the second frame protects the liquid crystal panel.

6. A portable computer comprising:  
a liquid crystal display device having a display surface  
and a first plurality of side surfaces;  
10 a body having an input device;  
a cover, coupled to an edge of the body, having a second  
plurality of side surfaces; and  
15 a fastening unit attaching the first plurality of side  
surfaces of the liquid crystal display device to the second  
plurality of side surfaces of the cover, the liquid crystal display  
device being mounted to the cover.

20 7. The portable computer according to claim 6, wherein the  
fastening unit includes a screw hole through the first and second  
side surfaces of the liquid crystal display device and cover,  
respectively, and a screw in the screw hole.

8. The portable computer according to claim 6, wherein the fastening unit includes an adhesive joining the first plurality of side surfaces of the liquid crystal display device to the second plurality of side surfaces of the cover.

5

9. A portable computer comprising:

a liquid crystal display device having a first side surface;

a body having an input device;

10 a cover joined with the body and having a second side surface; and

15 a fastening unit joining together the liquid crystal display device and the cover through the first and second side surfaces of the liquid crystal display device and the cover, respectively.

10. A liquid crystal display device comprising:

a first support frame having a first fastening member at a side surface of the first support frame;

20 a reflector unit adjacent the first support frame;

a light source adjacent to the reflector unit;

a light guide unit adjacent the reflector unit;

5

a protection unit adjacent the light guide unit;  
a prism unit adjacent the protection unit;  
a diffuser unit adjacent the prism unit;  
a liquid crystal panel adjacent the diffuser unit; and  
a second support frame having a second fastening member  
at a side surface of the second support frame, wherein the  
reflector unit, the protection unit, the prism unit, and the  
diffuser unit, the liquid crystal panel are between the first and  
second support frame, and the first and second support frame are  
10 attached to each other through the first and second fastening  
members through the side surfaces of the first and second support  
frames.

10

15

11. The liquid crystal device according to claim 10, wherein  
the first and second fastening members include a screw hole.

20

12. The liquid crystal device according to claim 10, wherein  
the side surfaces of the first and second support frames are  
substantially perpendicular to the viewing direction of the display  
device.

13. The liquid crystal device according to claim 10, wherein  
the first frame supports the light source.

14. The liquid crystal device according to claim 10, wherein  
5 the second frame protects the liquid crystal panel.
